## THIS IS UNEVALUATED INFORMATION

25X1

- 1. Prior to June 1953, work was carried out on a canal between two parts of the Beltic Sea, the Tromper Wiek and the Jasmunder Bodden near Ruegen Island. These two parts of the sea are separated by a narrow stretch of land which connects the bulk of Ruegen Island near the Wittow region with the assumd promontory. This promontory is a sub-island of Ruegen but is separated from the main island by the Grosser Jasmunder Bodden and the Kleiner Jasmunder Bodden. After the 17 June 1953 events, the canal work was discontinued. In order to prevent the sea water from penetrating into those parts of the canal which were already dug, the canal was partly filled with large cement blocks.
- 2. In mid-April 1955 the canal work was resumed. During this month, the cement blocks were removed and excavating was begun again.
- 3. The purpose of this work is to build a junction between the main body of the Baltic Sea and the SpyckerscherSee part of it. The SpyckerscherSee is almost entirely surrounded by land and connected with the GrosserJasmmder Bodden by a narrow passage. The junction between the main body of the Baltic Sea and the SpyckerscherSee is being built because Soviet submarine pens are to be constructed on the shores on the SpyckerscherSee.
- 4. The attached sketch shows:
  - a. The land stretch connecting Wittow on Ruegen with the Jasmand sub-island.
  - b. The town of Glove.
  - o. The Koenigshorn caps.
  - d. Approximate location of the canal.
  - e. The SpyckerscherSee.
  - f. The town of Polchow.
  - g. The town of Spycker.
  - h. The town of Boddin.
  - Sagard city. This is the northernmost point of the callroad going from Ruegen Island to Jasmund sub-island. This acad convects the island with Strelsund on the mainland.
